PARTS CATALOG (OBB766)

NOTE:
RoHS compliant products have <G> mark on the spec name plate.
Use the specified refrigerant only

Never use any refrigerant other than that specified.
Doing so may cause a burst, an explosion, or fire when the unit is being used, serviced, or disposed of.
Correct refrigerant is specified in the manuals and on the spec labels provided with our products.
We will not be held responsible for mechanical failure, system malfunction, unit breakdown or accidents caused by failure to follow the instructions.

Revision A:
• For Wi-Fi interface, 10. TROUBLE SHOOTING has been modified.

Revision B:
• MSZ-LN18VGW/V/B/R have been added.

1 TECHNICAL CHANGES

These models are compatible with the outdoor units with low standby power control.
Connecting these models to the MUZ-LN-VG series outdoor units enables the low standby power control. Refer to the technical guide about the low standby power control.

These models may be connected to the MUZ-LN-VG series after once connected to the MXZ series and operated, for example because of relocation. In that case, the MUZ-LN-VG series outdoor units will not operate without taking a step. Follow the procedure "Deleting the memorized abnormal condition" described in 10-2.1.

Unit: mm
8-1. TIMER SHORT MODE
For service, the following set time can be shortened by bridging the timer short mode point on the electronic control P.C. board.
(Refer to 10-7.)
- The set time for the ON/OFF timer can be reduced to 1 second for each minute.
- After the breaker is turned on, the time for starting the compressor, which normally takes 3 minutes, can be reduced to 1 minute. Restarting the compressor, which takes 3 minutes, cannot be reduced.

8-2. HOW TO SET REMOTE CONTROLLER EXCLUSIVELY FOR A PARTICULAR INDOOR UNIT
A maximum of 4 indoor units with wireless remote controllers can be used in a room.
To operate the indoor units individually with each remote controller, assign a number to each remote controller according to the number of the indoor unit.

This setting can be set only when all the following conditions are met:
- The remote controller is powered OFF.
- Weekly timer is not set.
- Weekly timer is not being edited.

(1) Hold down button on the remote controller for 2 seconds to enter the pairing mode.
(2) Press button again and assign a number to each remote controller.
   Each press of button advances the number in the following order: 1 → 2 → 3 → 4.
(3) Press button to complete the pairing setting.

After you turn the breaker ON, the remote controller that first sends a signal to an indoor unit will be regarded as the remote controller for the indoor unit.
Once they are set, the indoor unit will only receive the signal from the assigned remote controller afterwards.

8-3. SETTING THE INSTALLATION POSITION
Be sure to set the remote controller according to the installed position of the indoor unit.

Installation position:
Left: Distance to objects (wall, cabinet, etc.) is less than 50 cm to the left
Center: Distance to objects (wall, cabinet, etc.) is more than 50 cm to the left and right
Right: Distance to objects (wall, cabinet, etc.) is less than 50 cm to the right

The installation position can be set only when all the following conditions are met:
- The remote controller is powered OFF.
- Weekly timer is not set.
- Weekly timer is not being edited.

(1) Hold down button on the remote controller for 2 seconds to enter the position setting mode.
(2) Select the target installation position by pressing button. (Each press of the button displays the positions in order: center → right → left.)
(3) Press button to complete the position setting.
8-4. AUTO RESTART FUNCTION
When the indoor unit is controlled with the remote controller, the operation mode, the set temperature, and the fan speed are memorized by the indoor electronic control P.C. board. “AUTO RESTART FUNCTION” automatically starts operation in the same mode just before the shutoff of the main power.

Operation
① If the main power has been cut, the operation settings remain.
② After the power is restored, the unit restarts automatically according to the memory.
(However, it takes at least 3 minutes for the compressor to start running.)

How to disable “AUTO RESTART FUNCTION”
① Turn off the main power for the unit.
② Cut the jumper wire to JR77 on the indoor electronic control P.C. board. (Refer to 10-7.)

NOTE:
• The operation settings are memorized when 10 seconds have passed after the indoor unit was operated with the remote controller.
• If main power is turned OFF or a power failure occurs while AUTO START/STOP timer is active, the timer setting is cancelled.
• If the unit has been turned OFF with the remote controller before power failure, the auto restart function does not work as the power button of the remote controller is OFF.
• To prevent the breaker from tripping OFF due to the rush of starting current, systematize other home appliance not to turn ON at the same time.
• When some air conditioners are connected to the same supply system, if they are operated before power failure, the starting current of all the compressors may flow simultaneously at restart.
Therefore, the special counter-measures are required to prevent the main voltage-drop or the rush of the starting current by adding to the system that allows the units to start one by one.

8-5. Wi-Fi INTERFACE SETTING UP
This Wi-Fi interface communicates the status information and controls the commands from the MELCloud by connecting to an indoor unit.

Wi-Fi interface introduction

<table>
<thead>
<tr>
<th>No.</th>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>

<td>It shows the indoor unit state.</td>
</tr>
</tbody>
</table>

(1) MODE switch
- The MODE switch is used for selecting modes in configurations.
(2) RESET switch
- Hold down the RESET switch for 2 seconds to reboot the system.
- Hold down the RESET switch for 14 seconds to initialize the Wi-Fi interface to the factory default.

NOTE:
When the Wi-Fi interface is reset to the factory default, ALL the configuration information will be lost. Take great care in implementing this operation.
WIRELESS REMOTE CONTROLLER

NOTE: Last setting will be stored after the unit is turned OFF with the remote controller. Indoor unit receives the signal of the remote controller with beeps.

INDOOR UNIT DISPLAY SECTION

Operation Indicator lamp
The operation indicator at the right side of the indoor unit indicates the operation state.

- The following indication applies regardless of shape of the indication.

<table>
<thead>
<tr>
<th>Indication</th>
<th>Operation state</th>
<th>Room temperature</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
<td></td>
</tr>
</tbody>
</table>
9-1. COOL (△) OPERATION
(1) Press STOP/OPERATE (OFF/ON) button.
OPERATION INDICATOR lamp of the indoor unit turns on with a beep tone.
(2) Select COOL mode with OPERATION SELECT button.
(3) Press TEMPERATURE buttons TEMP  or  button to select the desired temperature. The setting range is 16 - 31°C.

1. Coil frost prevention
   The compressor operational frequency is controlled by the temperature of the indoor heat exchanger to prevent the coil from frosting.
   When the temperature of indoor heat exchanger becomes too low, the coil frost prevention mode works.
   The indoor fan operates at the set speed and the compressor stops. This mode continues until the temperature of indoor heat exchanger rises.

2. Low outside temperature operation
   When the outside temperature is lower, low outside temperature operation starts, and the outdoor fan slows or stops.

3. Indoor fan speed control
   When the thermostat turns OFF, the indoor fan operates very Low to reduce power consumption.
   When the room temperature rises and the thermostat is ON, the indoor fan operates according to the settings on the remote controller.

9-2. DRY (△) OPERATION
(1) Press STOP/OPERATE (OFF/ON) button.
OPERATION INDICATOR lamp of the indoor unit turns on with a beep tone.
(2) Select DRY mode with OPERATION SELECT button.
(3) The set temperature is determined from the initial room temperature.

1. Coil frost prevention
   Coil frost prevention works the same way as that in COOL mode. (9-1.1.)

2. Low outside temperature operation
   Low outside temperature operation works the same way as that in COOL mode. (9-1.2.)

3. Indoor fan speed control
   Indoor fan speed control works the same way as that in COOL mode. (9-1.3.)

9-3. FAN (△) OPERATION
(1) OPERATION INDICATOR lamp of the indoor unit turns on with a beep tone.
(2) Select FAN mode with OPERATION SELECT button.
(3) Select the desired fan speed. When AUTO, it becomes Low.
 Only indoor fan operates.
 Outdoor unit does not operate.

9-4. HEAT (△) OPERATION
(1) Press STOP/OPERATE (OFF/ON) button.
OPERATION INDICATOR lamp of the indoor unit turns on with a beep tone.
(2) Select HEAT mode with OPERATION SELECT button.
(3) Press TEMPERATURE buttons TEMP  or  button to select the desired temperature. The setting range is 10 - 31°C.

1. Cold air prevention control
   When the compressor is not operating or is starting, and the temperature of indoor heat exchanger and/or the room temperature is low or when defrosting is being done, the indoor fan will stop or rotate in Very Low speed.

2. High pressure protection
   The compressor operational frequency is controlled by the temperature of the indoor heat exchanger to prevent the condensing pressure from increasing excessively.
   When the temperature of indoor heat exchanger becomes too high, the high pressure protection works.
   The indoor fan operates following the cold air prevention control. This mode continues until the temperature of indoor heat exchanger falls.

3. Defrosting
   Defrosting starts when the temperature of outdoor heat exchanger becomes too low.
   The compressor stops once, the indoor/outdoor fans stop, the 4-way valve reverses, and the compressor re-starts.
   This mode continues until the temperature of outdoor heat exchanger rises or the fixed time passes.

9-5. AUTO CHANGE OVER ... AUTO MODE OPERATION
Once desired temperature is set, unit operation is switched automatically between COOL and HEAT operation.

Mode selection
(1) Initial mode
   When unit starts the operation with AUTO operation from OFF:
   • If the room temperature is higher than the set temperature, operation starts in COOL mode.
   • If the room temperature is equal to or lower than the set temperature, operation starts in HEAT mode.

(2) Mode change
   COOL mode changes to HEAT mode when about 15 minutes have passed with the room temperature 1°C below the set temperature.
   HEAT mode changes to COOL mode when about 15 minutes have passed with the room temperature 1°C above the set temperature.
NOTE 1:
If 2 or more indoor units are operating in multi system, there might be a case that the indoor unit, which is operating in (AUTO), cannot change over to the other operating mode (COOL ↔ HEAT) and becomes a state of standby. Refer to NOTE 2 “FOR MULTI SYSTEM AIR CONDITIONER”.

NOTE 2:
FOR MULTI SYSTEM AIR CONDITIONER
OUTDOOR UNIT: MXZ series
Multi system air conditioner can connect 2 or more indoor units with one outdoor unit.
• When you try to operate 2 or more indoor units with one outdoor unit simultaneously, one for the cooling and the others for heating, the operation mode of the indoor unit that operates first is selected. Other indoor units cannot operate, and operation indicator lamp flashes as shown in the figure below. In this case, please set all the indoor units to the same operation mode.

OPERATION INDICATOR

• When indoor unit starts the operation while the defrosting of outdoor unit is being done, it takes a few minutes (max. 10 minutes) to blow out the warm air.
• In the heating operation, though indoor unit that does not operate may get warm or the sound of refrigerant flowing may be heard, they are not malfunction. The reason is that the refrigerant continuously flows into it.

9-6. AUTO VANE OPERATION
1. Horizontal vane
   (1) Vane motor drive
   These models are equipped with stepping motors for the horizontal vanes. The rotating direction, speed, and angle of the motor are controlled by pulse signals (approximately 12 V) transmitted from indoor microprocessor.

   (2) The horizontal vane angle and mode change as follows by pressing VANE CONTROL ( ) button.

   ![Horizontal Vane Angle Diagram]

   NOTE: The right and left horizontal vanes set to the same level may not align perfectly.

   (3) Positioning
   To confirm the standard position, the vane moves until it touches the vane stopper. Then the vane is set to the selected angle.
   Confirmation of standard position is performed in the following cases:
   (a) When the operation starts or finishes (including timer operation).
   (b) When the test run starts.
   (c) When standby mode (only during multi system operation) starts or finishes.

   (4) VANE AUTO ( ) mode
   In VANE AUTO mode, the microprocessor automatically determines the vane angle to make the optimum room temperature distribution.

   In COOL and DRY operation
   Vane angle is fixed to Horizontal position.

   In HEAT operation
   Vane angle is fixed to Angle 4.

   ![Horizontal Position Diagram]

   (5) STOP (operation OFF) and ON TIMER standby
   In the following cases, the horizontal vane returns to the closed position.
   (a) When STOP/OPERATE (OFF/ON) button is pressed (POWER OFF).
   (b) When the operation is stopped by the emergency operation.
   (c) When ON TIMER is ON standby.

   (6) Dew prevention
   During COOL or DRY operation with the lower position when the compressor cumulative operation time exceeds 1 hour, the vane angle automatically changes to Angle 1 for dew prevention.

   ![Dew Prevention Diagram]
(7) SWING (ساط) mode
   By selecting SWING mode with VANE CONTROL button, the horizontal vanes swing vertically.
   When COOL, DRY or FAN mode is selected, only the upper vane swings.

(8) Cold air prevention in HEAT operation
   The horizontal vane position is set to Upward.
   **NOTE:** When 2 or more indoor units are operated with multi outdoor unit, even if any indoor unit turns thermostat off, this control does not work in the indoor unit.

(9) ECONO COOL (80) operation (ECONOmical operation)
   When ECONO COOL button is pressed in COOL mode, set temperature is automatically set 2°C higher by the microprocessor. However, the temperature on the LCD screen on the remote controller is not changed. Also the horizontal vane swings in various cycle.
   SWING operation makes you feel cooler than set temperature. So, even though the set temperature is higher, the air conditioner can keep comfort. As a result, energy can be saved.
   To cancel this operation, select a different mode or press one of the following buttons in ECONO COOL operation: ECONO COOL, VANE CONTROL, LONG or POWERFUL button.

(10) POWERFUL (20) operation
   The air conditioner automatically adjusts the fan speed and the set temperature, and operates the POWERFUL mode. The POWERFUL mode is cancelled automatically 15 minutes after operation starts, or when POWERFUL button is pressed once again within 15 minutes after operation starts. The operation mode returns to the mode prior to POWERFUL operation. To cancel this operation manually, select a different mode or press one of the following buttons within 15 minutes after operation starts: STOP/OPERATE (OFF/ON), ECONO COOL, FAN SPEED CONTROL or i-save button.

2. Vertical vane
(1) Vane motor drive
   These models are equipped with a stepping motor for the vertical vane. The rotating direction, speed, and angle of the motor are controlled by pulse signals (approximately 12 V) transmitted from microprocessor.

(2) The vertical vane angle and mode change as follows by pressing WIDE VANE CONTROL button.

(3) Positioning
   ![Diagram]

   To confirm the standard position, the vane moves until it touches the vane stopper. Then the vane is set to the selected angle.
   Confirmation of standard position is performed in the following cases:
   (a) STOP/OPERATE (OFF/ON) button is pressed (POWER ON).

(4) SWING (ساط) MODE
   By selecting SWING mode with WIDE VANE CONTROL button, the vertical vane swings horizontally. The remote controller displays “ساط”. Swing mode is cancelled when WIDE MODE CONTROL button is pressed once again.
9-7. TIMER OPERATION

1. How to set the time
   (1) Check that the current time is set correctly.
   NOTE: Timer operation will not work without setting the current time. Initially “0:00” blinks at the current time display of TIME MONITOR, so set the current time correctly with CLOCK button.

   How to set the current time
   (a) Press the CLOCK button.
   (b) Press the TIME SET buttons ( and ) to set the current time.
       - Each time FORWARD button ( ) is pressed, the set time increases by 1 minute, and each time BACKWARD button ( ) is pressed, the set time decreases by 1 minute.
       - Pressing those buttons longer, the set time increases/decreases by 10 minutes.
   (c) Press the CLOCK set button.
   (2) Press STOP/OPERATE (OFF/ON) button to start the air conditioner.
   (3) Set the time of timer.

   ON timer setting
   (a) Press ON TIMER button ( ) during operation.
   (b) Set the time of the timer using TIME SET buttons ( and ).

   OFF timer setting
   (a) Press OFF TIMER button ( ) during operation.
   (b) Set the time of the timer using TIME SET buttons ( and ).

   *Each time FORWARD button ( ) is pressed, the set time increases by 10 minutes: each time BACKWARD button ( ) is pressed, the set time decreases by 10 minutes.

2. To release the timer
   To release ON timer, press ON TIMER button ( ).
   To release OFF timer, press OFF TIMER button ( ).
   TIMER is cancelled and the display of set time disappears.

PROGRAM TIMER

- OFF timer and ON timer can be used in combination. The set time that is reached first will operate first.
- “ ” and “ ” display shows the order of OFF timer and ON timer operation.

(Example 1) The current time is 8:00 PM.
   The unit turns off at 11:00 PM, and on at 6:00 AM.
(Example 2) The current time is 11:00 AM.
   The unit turns on at 5:00 PM, and off at 9:00 PM.

NOTE: If the main power is turned OFF or a power failure occurs while ON/OFF timer is active, the timer setting is cancelled. As these models are equipped with an auto restart function, the air conditioner starts operating with timer cancelled when power is restored.
9-8. WEEKLY TIMER OPERATION

- A maximum of 4 ON or OFF timers can be set for individual days of the week.
- A maximum of 28 ON or OFF timers can be set for a week.

* Make sure that the current time and day are set correctly.

1. How to set the weekly timer

* Make sure that the current time and day are set correctly.

   1. Press \[\text{SET} \] button to enter the weekly timer setting mode. \[\text{SET} \] blinks.

   2. Press \[\text{DAY} \] and \[1 \rightarrow 4\] buttons to select setting day and number.

   3. Press \[\text{ON/OFF} \] and \[\text{TIME} \] buttons to set ON/OFF, time, and temperature.

   E.g.: [ON], [6:00] and [24°C] are selected.

   Pressing \[\text{DAY} \] selects the day of the week to be set.

   Pressing \[1 \rightarrow 4\] selects the setting number.

   * All days can be selected.

   Pressing \[\text{ON/OFF} \] selects the ON/OFF timer.

   Pressing \[\text{TIME} \] adjusts the time.

   Pressing \[\text{TEMP} \] adjusts the temperature.

   * Hold down the button to change the time quickly.

   * The temperature can be set between 16°C and 31°C at COOL operation.

   * The temperature can be set between 10°C and 31°C at HEAT operation.

NOTE:

- The simple ON/OFF timer setting is available while the weekly timer is on. In this case, the ON/OFF timer has priority over the weekly timer; the weekly timer operation will start again after the simple ON/OFF timer is complete.

Press \[\text{DAY} \] and \[1 \rightarrow 4\] buttons to continue setting the timer for other days and/or numbers.
Press \textbf{SET} button to turn the weekly timer ON. ([\textbf{lights}].)

When the weekly timer is ON, the day of the week whose timer setting is completed, will light.

Press \textbf{button again to turn the weekly timer OFF. ([\textbf{goes out}].}

\textbf{NOTE:}
The saved settings will not be cleared when the weekly timer is turned OFF.

\section*{2. Checking weekly timer setting}

(1) Press \textbf{button to enter the weekly timer setting mode.} 

\textbf{blinks.}

(2) Press \textbf{DAY} or \textbf{number} buttons to view the setting of the particular day or number.

(3) Press \textbf{CANCEL} button to exit the weekly timer setting.

\textbf{NOTE:}
When all days of the week are selected to view the settings and a different setting is included among them, \textbf{will be displayed.}

\section*{9-9. i-see CONTROL (\textit{\textcircled{i}}) MODE AND ABSENCE DETECTION}

In the i-see control mode, the room temperature is controlled based on the sensible temperature.

(1) Press SENSOR button with a thin instrument during COOL, DRY, HEAT and AUTO mode to activate i-see control mode (\textit{\textcircled{i}}). The default setting is “active”.

(2) Press SENSOR button several times to cancel i-see control mode.

```
\textit{\textcircled{i}} \rightarrow \textit{\textcircled{H}} \rightarrow \textit{\textcircled{i}} \rightarrow \textit{\textcircled{C}} \rightarrow \text{Cancel}
```

\textbf{NOTE:}
Any person at the following places cannot be detected:
\begin{itemize}
  \item Along the wall on which the air conditioner is installed
  \item Directly under the air conditioner
  \item Where any obstacle, such as furniture, is between the person and the air conditioner
\end{itemize}

A person may not be detected in the following situations:
\begin{itemize}
  \item Room temperature is high.
  \item A person wears heavy clothes and his/her skin is not exposed.
  \item A heating element of which temperature changes significantly is present.
  \item Some heat sources, such as a small child or pet, may not be sensed.
  \item A heat source and the air conditioner are more than 6 m apart.
  \item A heat source does not move for a long time.
\end{itemize}

Do not touch the i-see SENSOR. This may cause malfunction of the i-see SENSOR. The intermittent operating sound is a normal sound produced when the i-see SENSOR is moving from side to side.
ABSENCE DETECTION (.Imaging)

This function automatically changes the operation to No occupancy energy-saving mode or No occupancy Auto-OFF mode when nobody is in the room.

(1) To activate this No occupancy energy-saving mode, press SENSOR button until appears on the operation display of the remote controller.

(2) To activate this No occupancy Auto-OFF mode, appears on the operation display of the remote controller.

(3) Press SENSOR button again to cancel the ABSENCE DETECTION.

Even if the unit is turned OFF due to No occupancy Auto-OFF mode, the display of the remote controller remains to indicate the unit is in operation. Press STOP/OPERATE(OFF/ON) button then press STOP/OPERATE(OFF/ON) button again to restart operation.

When OFF timer is set, a priority is given to OFF timer.

No occupancy energy saving mode or No occupancy Auto-OFF mode are not available during POWERFUL operation.

The unit will not be turned off if no one is detected during normal operation mode, even though No occupancy Auto-OFF mode is activated.

9-10. AIRFLOW CONTROL MODE

AIRFLOW CONTROL mode offers air conditioning according to a location of an occupant in a room detected by i-see SENSOR.

(1) Press DIRECTION button during COOL, DRY, HEAT or AUTO mode to activate the AIRFLOW CONTROL mode. This mode is only available when the i-see control mode is effective.

(2) Each press of DIRECTION button changes AIRFLOW CONTROL in the following order:

- (INDIRECT) : An occupant will be less exposed to direct airflow.
- (DIRECT) : Mainly the vicinity of an occupant will be air-conditioned.
- (EVEN) : The unit learns the area where an occupant spend most of the time, and evens out the temperature of that area.

NOTE:
- Horizontal and vertical airflow directions will be automatically selected.
- When more than a couple of people are in a room, the AIRFLOW CONTROL mode may work less effectively.
- If you still feel uncomfortable with the air direction determined by the INDIRECT mode, adjust the air direction manually.

(3) Cancelling the i-see control mode automatically cancels the AIRFLOW CONTROL mode.
- The AIRFLOW CONTROL mode is also cancelled when the VANE CONTROL or WIDE VANE buttons is pressed.
9-11. NIGHT MODE (enguin) OPERATION
NIGHT MODE changed the brightness of the operation indicator, disables the beep sound and limits the noise level of the outdoor unit.
(1) Press NIGHT MODE button during operation to activate NIGHT mode (enguin).
• The operation indicator lamp dims.
• The beep sound will be disabled except that emitted when the operation is started or stopped.
• Noise level of the outdoor unit will be lower than that mentioned in SPECIFICATIONS. (Except the connection to MXZ.)
(2) Press NIGHT MODE button to cancel NIGHT mode (enguin).

NOTE:
• Noise level of the outdoor unit may not change after startup of the unit, during the protection operation, or depending on other operating conditions.
• The fan speed of the indoor unit will not change.
• The operation indicator lamp will be hard to be seen in a bright room.
• Operating POWERFUL operation during NIGHT mode will increase the noise level of the outdoor unit.
• Noise level of the outdoor unit will not decrease during Multi system operation.

9-12. AIR PURIFYING (††) OPERATION
In the AIR PURIFYING operation, the indoor unit built-in device reduces airborne fungi, viruses, mold, and allergens.
(1) Press PURIFIER button to start AIR PURIFYING operation.
  • AIR PURIFYING lamp turns on. (Display section)
(2) Press PURIFIER button again to cancel AIR PURIFYING operation.
  • AIR PURIFYING lamp turns off. (Display section)

NOTE:
• Never touch the air purifying device during operation. Although the air purifying device is safety-conscious design, touching this device could be the cause of trouble as this device discharge high voltage electricity.
• A “hissing” sound may be heard during the air purifying operation. This sound is produced when plasma is being discharged. This is not a malfunction.
• AIR PURIFYING lamp does not turn on if the front panel is not closed completely.

9-13. i-save (††) OPERATION
1. How to set i-save operation
(1) Press STOP/OPERATE (OFF/ON) button.
(2) Select COOL, HEAT or ECONO COOL mode.
(3) Press i-save button.
(4) Set the temperature, fan speed, and airflow direction for i-save operation.

NOTE:
• i-save operation cannot be selected during DRY, FAN or AUTO mode operation.
• The setting range of HEAT mode i-save operation is 10 - 31°C.
• 2 groups of setting can be saved. (One for COOL/ECONO COOL, one for HEAT)

2. How to cancel operation
• Press i-save button again.
• i-save operation can also be cancelled by pressing POWERFUL button or OPERATION SELECT button to change the operation mode.
  The same setting is select from the next time by simply pressing i-save button.
9-14. OPERATION LOCK
This function locks operation mode only. Other functions, such as OFF/ON, temperature setting, or airflow direction adjustment, are available.

(1) Hold down \[MODE\] button and \[VANE\] button simultaneously for 2 seconds while the unit is not operating to enable OPERATION LOCK.

The icon for the locked operation mode blinks.

(2) Hold down \[MODE\] button and \[VANE\] button simultaneously for 2 seconds again while the unit is not operating to disable OPERATION LOCK.

- The icon for the locked operation mode blinks when \[MODE\] button and \[VANE\] button are held down to enable or disable OPERATION LOCK or \[\) button is pressed during operation while OPERATION LOCK is enabled.
- AIR PURIFYING operation is not available when OPERATION LOCK is enabled in a mode other than FAN mode.

9-15. EMERGENCY/TEST OPERATION
In the case of test run operation or emergency operation, use EMERGENCY OPERATION switch on the right side of the indoor unit.

Emergency operation is available when the remote controller is missing or has failed, or when the batteries in the remote controller are running down. The unit will start and OPERATION INDICATOR lamp will light up.

The first 30 minutes of operation is the test run operation. This operation is for servicing. The indoor fan runs at High speed and the temperature control does not work.

After 30 minutes of test run operation, the system shifts to EMERGENCY COOL/HEAT MODE with a set temperature of 24°C. The fan speed shifts to Med.

The coil frost prevention works even in the test run or the emergency operation.

In the test run or emergency operation, the horizontal vane operates in VANE AUTO (\[\) mode.

Emergency operation continues until EMERGENCY OPERATION switch is pressed once or twice or the unit receives any signal from the remote controller. In the latter case, normal operation will start.

NOTE: Do not press EMERGENCY OPERATION switch during normal operation.

9-16. 3-MINUTE TIME DELAY OPERATION
When the system turns OFF, compressor will not restart for 3 minutes as 3-minute time delay function operates to protect compressor from overload.

<table>
<thead>

Emergency operation switch (E.O. SW)
10 TROUBLESHOOTING

10-1. CAUTIONS ON TROUBLESHOOTING

1. Before troubleshooting, check the following
   1) Check the power supply voltage.
   2) Check the indoor/outdoor connecting wire for miswiring.

2. Take care of the following during servicing
   1) Before servicing the air conditioner, be sure to turn OFF the main unit first with the remote controller, and then after confirming the horizontal vane is closed, turn OFF the breaker and/or disconnect the power plug.
   2) Be sure to turn OFF the power supply before removing the front panel, the cabinet, the top panel, and the P.C. board.
   3) When removing the P.C. board, hold the edge of the board with care NOT to apply stress on the components.
   4) When connecting or disconnecting the connectors, hold the connector housing. DO NOT pull the lead wires.

3. Troubleshooting procedure
   1) Check if the OPERATION INDICATOR lamp on the indoor unit is flashing ON and OFF to indicate an abnormality. To make sure, check how many times the OPERATION INDICATOR lamp is flashing ON and OFF before starting service work.
   2) Before servicing, check that the connector and terminal are connected properly.
   3) When the electronic control P.C. board seems to be defective, check the copper foil pattern for disconnection and the components for bursting and discoloration.
   4) When troubleshooting, Refer to 10-2, 10-3 and 10-4.

4. How to replace batteries
   Weak batteries may cause the remote controller malfunction. In this case, replace the batteries to operate the remote controller normally.

   ① Remove the front lid and insert batteries. Then reattach the front lid.

   ② Press RESET button with a thin instrument, and then use the remote controller.

NOTE: 1. If RESET button is not pressed, the remote controller may not operate correctly.
       2. This remote controller has a circuit to automatically reset the microcomputer when batteries are replaced. This function is equipped to prevent the microcomputer from malfunctioning due to the voltage drop caused by the battery replacement.
       3. Do not use the leaking batteries.
10-2. FAILURE MODE RECALL FUNCTION

Outline of the function
This air conditioner can memorize the abnormal condition which has occurred once. Even though LED indication listed on the troubleshooting check table (10-4.) disappears, the memorized failure details can be recalled.

1. Flow chart of failure mode recall function for the indoor/outdoor unit

**Operational procedure**

**Setting up the failure mode recall function**

Turn ON the power supply.

1. While pressing both OPERATION SELECT button and TEMP button on the remote controller at the same time, press RESET button.
2. Hold down the other two buttons for another 3 seconds. Make sure that the indicators on the LCD screen shown in the right figure are all displayed. Then release the buttons.
3. The set temperature is displayed to 24°C.

Press STOP/OPERATE (OFF/ON) button of the remote controller (the set temperature is displayed) with the remote controller headed towards the indoor unit. *1

Does POWER lamp on the indoor unit blink at the interval of 0.5 seconds? Blinks: Either indoor or outdoor unit is abnormal. Beep is emitted at the same timing as the blinking of POWER lamp.*2

Indoor unit is normal. But the outdoor unit might be abnormal because there are some abnormalities that cannot be recalled with this way. Check if outdoor unit is abnormal according to the detailed outdoor unit failure mode recall function.

**Judgment of indoor/outdoor abnormality**

Before blinking, does POWER lamp stay ON for 3 seconds?

1. When it stays ON for 3 seconds (without beep): The outdoor unit is abnormal.
2. The indoor unit is abnormal.

Check the blinking pattern, and identify the abnormal point by referring to the table of indoor unit failure mode recall function. (Refer to 10-2.4) Make sure to check at least 2 consecutive blinking cycles.*2

The outdoor unit is abnormal. Check the blinking pattern, and identify the abnormal point by referring to the table of outdoor unit failure mode recall function. (Refer to outdoor unit service manual.) Make sure to check at least 2 consecutive blinking cycles.*3

**Releasing the failure mode recall function**

Release the failure mode recall function by the following procedures. Turn OFF the power supply and turn it ON again.

Press RESET button of the remote controller.

**Repair the failure parts.**

**Deleting the memorized abnormal condition**

1. After repairing the unit, recall the failure mode again according to "Setting up the failure mode recall function" mentioned above.
2. Press STOP/OPERATE (OFF/ON) button of the remote controller (the set temperature is displayed) with the remote controller headed towards the indoor unit.
3. Press EMERGENCY OPERATION switch so that the memorized abnormal condition is deleted. *4
4. Release the failure mode recall function according to "Releasing the failure mode recall function" mentioned above.

**NOTE:** The indoor unit does not operate by smartphone, refer to 10-3.2 "Check of Wi-Fi Interface".

**NOTE:** It takes up to 1 minute to indicate the outdoor unit abnormality. Even if the OPERATION INDICATOR lamp is not lighting, keep checking at least 1 minute or longer.

**NOTE:** The indoor unit does not operate by smartphone, refer to 10-3.2 "Check of Wi-Fi Interface".

**NOTE:** The information regarding whether the connected outdoor unit is a low-standby-power model or a non-low-standby-power model will also be initialized. (Default= compatible with a low-standby-power model)
2. Flow chart of AIR PURIFYING power failure mode and i-see SENSOR failure mode recall function

Operational procedure

The air purifying device or i-see SENSOR might be abnormal. Check if the air purifying device or i-see SENSOR is abnormal according to the following procedures.

Make sure that the remote controller is set to the failure mode recall function.

With the remote controller headed towards the indoor unit, press TEMP \( \geq \) or TEMP \( \leq \) button to adjust the set temperature to 23 °C.*

Does POWER lamp on the indoor unit blink at the interval of 0.5 seconds?

- Blinks: The air purifying device is abnormal. Beep is emitted at the same timing as the blinking of POWER lamp.*2
- OFF: No.

The air purifying device or i-see SENSOR is abnormal. Check the blinking pattern, and identify the abnormal point with the table of AIR PURIFYING power or i-see SENSOR failure mode recall function (10-2.5.). Make sure to check at least 2 consecutive blinking cycles.*2

Deleting the memorized abnormal condition

Repair the failure parts.

Releasing the failure mode recall function

- Release the failure mode recall function by the following procedures.
  - Turn OFF the power supply and turn it ON again.
  - Press RESET button of the remote controller.

Release the failure mode recall function according to the left mentioned procedure.

Deleting the memorized abnormal condition

1. After repairing the unit, recall the failure mode again according to “Setting up the failure mode recall function” mentioned above.
2. Press STOP/OPERATE (OFF/ON) button of the remote controller (the set temperature is displayed) with the remote controller headed towards the indoor unit.
3. Press EMERGENCY OPERATION switch so that the memorized abnormal condition is deleted.
4. Release the failure mode recall function according to “Releasing the failure mode recall function” mentioned above.

Note 1. Make sure to release the failure mode recall function after it is set up, otherwise the unit cannot operate properly.

2. If the abnormal condition is not deleted from the memory, the last abnormal condition is kept memorized.

3. AIR PURIFYING power operation check

AIR PURIFYING power goes ON when PURIFIER button on the remote controller is pressed with any set temperature displayed during failure mode recall function.

Check the operation display section of the remote controller to confirm that AIR PURIFYING power is activated. While AIR PURIFYING lamp stays OFF, it means normal.

Flashing AIR PURIFYING lamp means abnormal, the AIR PURIFYING power is not conducted.

<table>
<thead>
<tr>
<th>AIR PURIFYING lamp</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Continuously blinking</td>
<td>Follow &quot;Check of AIR PURIFYING power&quot; to identify the error. (Refer to 10-6.7.)</td>
</tr>
<tr>
<td>2-time flash</td>
<td>AIR PURIFYING power control circuit on the indoor electronic control P.C. board is out of order. (Refer to 10-6.8.)</td>
</tr>
</tbody>
</table>

NOTE: Perform the above mentioned check with the front panel closed. The interlock switch (Air purifying device) works by opening front panel and the AIR PURIFYING power is cut.
4. Table of indoor unit failure mode recall function (When recalled at a set temperature of 24°C)

</tbody>
</table>

NOTE: Blinking patterns of this mode differ from the ones of TROUBLESHOOTING CHECK TABLE (10-4.).

6. Operation check on i-see SENSOR

While recalling the failure details, set the temperature to 19°C to perform the simple check on the i-see SENSOR.

Place your hand over the i-see SENSOR, and the buzzer will beep at 1 second intervals. (Normal detection temperature range is 34 to 39°C.)

If the buzzer does not beep, check for disconnection of the connectors.

Set the temperature to 24°C to exit the simple check mode on the i-see SENSOR.
10-3. INSTRUCTION OF TROUBLESHOOTING

1. Check of the unit.

Start

Indoor unit operates.
Outdoor unit does not operate.

Indoor unit operates. Outdoor unit does not operate normally.

Indoor unit does not receive the signal from remote controller.

POWER lamp on the indoor unit is flashing ON and OFF.

Outdoor unit operates only in Test Run operation. *1.

Unit does not operate normally in COOL or HEAT mode.

Indoor unit operates when EMERGENCY OPERATION switch is pressed.

Indoor unit does not operate when EMERGENCY OPERATION switch is pressed.

1. Check indoor/outdoor connecting wire. (Check if the power is supplied to the indoor unit.)
2. Refer to 10-6. "Check of indoor P.C. board and indoor fan motor".

Refer to 10-6. "How to check miswiring and serial signal error".

Check room temperature thermistor.
Refer to "How to check/inverter/compressor".

Refer to 10-6. "Check of R.V. coil".

Refer to 10-6. "Check of remote controller and indoor electronic control P.C. board".

Check room temperature thermistor and indoor coil thermistor. Refer to 10-7. "Test point diagram and voltage".

Refer to 10-6. "Check of the unit." OBH766B

POWER lamp Flash on and off at 0.5-second intervals Cause: Indoor/Outdoor unit • Miswiring or trouble of serial signal

POWER lamp 2-time flash Cause: Indoor unit • Trouble of room temperature / indoor coil thermistor

POWER lamp 3-time flash Cause: Indoor unit • Trouble of indoor fan motor

POWER lamp 4-time flash Cause: Indoor unit • Trouble of indoor unit control system

POWER lamp 5-time flash Cause: Outdoor unit • Trouble of thermostat in outdoor unit

POWER lamp 6-time flash Cause: Outdoor unit • Trouble of outdoor power system abnormality

POWER lamp 7-time flash Cause: Outdoor unit • Trouble of outdoor control system

POWER lamp 8-time flash or more Cause: Outdoor unit • Other abnormality

Refer to 10-6. "Check of AIR PURIFYING power".

Refer to outdoor unit service manual.

NOTE: The indoor unit does not operate by smartphone, refer to 10-3.2. "Check of Wi-Fi Interface".

*1. "Test Run operation" means the operation within 30 minutes after EMERGENCY OPERATION switch is pressed.
2. Check of Wi-Fi interface

Follow the procedure below if the air conditioner cannot be monitored or controlled with a device such as a smartphone.

Start

Is the UNIT lamp on the Wi-Fi interface blinking?

Yes

There is a problem in communication between the air conditioner and the Wi-Fi interface. Check whether the air conditioner can be operated with a remote controller.
- If the air conditioner does not operate, Check indoor/outdoor connecting wire and the power supply. (Check the indoor power P.C. board and the indoor electronic control P.C. board.)
- If the indoor/outdoor wire is connected and the power supplied, hold down the RESET switch of Wi-Fi interface for 2 seconds. The communication with the air conditioner is normal if the UNIT lamp starts blinking. (It may take a few minutes to blinking.)
- If the problem persists, check the cable and the connector of Wi-Fi interface.
- If all else failed, replace the Wi-Fi interface.
- If not improve it even if replace the Wi-Fi interface, replace the indoor electronic control P.C. board.

No

Can the device such as a smartphone be connected to the Internet through the router?

Yes

Check the instruction manuals for the router and the device such as a smartphone, and enable the Internet access.

No

Has pairing of the Wi-Fi interface and the router been successfully completed?

Yes

Connect the Wi-Fi interface and the router by referring to SETUP QUICK REFERENCE GUIDE and SETUP MANUAL. If the connection failed, check the following and connect the Wi-Fi interface and the router again:
- Make sure that communication distance is not too far between the Wi-Fi interface and the router. Move the router closer to the Wi-Fi interface.
- Make sure that the router uses WPA2-AES encryption.
- Make sure that the number of the connected devices to the router does not exceed the limit.

No

Is the NET lamp on the Wi-Fi interface blinking?

Yes

If the NET lamp is not blinking, the Wi-Fi interface and the router are not communicating properly. Move the router and check whether the communication has been improved.
- Make sure that the router uses WPA2-AES encryption.
- Make sure that the number of the connected devices to the router does not exceed the limit.

No

Is the ERR lamp on the Wi-Fi interface blinking?

Yes

Communication between the Wi-Fi interface and the router (or MELCloud) has been failed.
The following characters can not be used with SSID, so please change if you are using. [* , ' , < , > , & ]

No

If the problem persists, go through this procedure again from the beginning.
10-4. TROUBLESHOOTING CHECK TABLE
Before taking measures, make sure that the symptom reappears for accurate troubleshooting.
When the indoor unit has started operation and detected an abnormality of the following condition (the first detection after the power ON), the indoor fan motor turns OFF and OPERATION INDICATOR lamp flashes.

- The following indicator applies regardless of shape of the indication.

**OPERATION INDICATOR**

<table>
<thead>

</tr>
</tbody>
</table>

**NOTE**: The indoor unit may have been connected to a non-low-standby-power model outdoor unit. To use a low-standby-power model, clear the error history by referring to "Deleting the memorized abnormal condition" described in 10-2.1. When the error history is being cleared, the connection information also will be initialized. The indoor unit will be compatible with a low-standby-power model after initialization. If the operation indicator lamp continues to flash as shown in No.1 after the procedure, refer to 10-6. [How to check miswiring and serial error].

10-6. TROUBLESHOOTING FLOW

[A] Check of indoor fan motor

The indoor fan motor error has occurred, and the indoor fan does not operate.

Turn OFF the power supply.

Is there any foreign matter that interferes the rotation of the line flow fan?

Yes

No

Remove the foreign matter and adjust the line flow fan.

Pay enough attention to the high voltage on the fan motor connector CN211.

Turn ON the power supply, wait 5 seconds or more, and then press EMERGENCY OPERATION switch.

Measure the supply voltage as follows within 12 seconds after EMERGENCY OPERATION switch is pressed.

If more than 12 seconds passes, turn OFF the power supply and turn it ON again, then measure the voltage.

<Indoor power P.C. board>
1. Measure the voltage between CN211 ①(+), ②(–).
2. Measure the voltage between CN211 ③(+), ③(–).
   <Indoor electronic control P.C. board>
3. Measure the voltage between CN102 ① and GND (–).

*If more than 12 seconds pass after EMERGENCY OPERATION switch is pressed, the voltage measured at 2. above goes 0 V DC although the indoor P.C. board is normal.

Does the voltage between CN211 ①(+), ②(–) on the power P.C. board rise to the range of 3 to 6 V DC within 12 seconds after EMERGENCY OPERATION switch is pressed?

Yes

Replace the indoor fan motor.

No

Does the voltage between CN102 ③ and GND (–) on the indoor electronic control P.C. board fall to 2 V or less within 12 seconds after EMERGENCY OPERATION switch is pressed?

Yes

Replace the indoor electronic control P.C. board.

No

Replace the indoor power P.C. board.

The indoor fan motor error has occurred, and the indoor fan repeats “12-second ON and 30-second OFF” 3 times, and then stops.

Measure the voltage between CN211 ①(+), ②(–) while the fan motor is rotating.

Is it unchanged holding 0 or 15 V DC?

No (Changed)

Yes (Unchanged)

Measure the voltage CN102 ③(+) and GND (–) on the indoor electronic control P.C. board when the fan motor is rotating.

Replace the indoor fan motor.

Replace the indoor power P.C. board.

Is it unchanged holding 0 or 5 V DC?

No (Changed)

Yes (Unchanged)

Replace the indoor electronic control P.C. board.
**B Check of remote controller and indoor electronic control P.C. board**

**NOTE:** Check if the remote controller is exclusive for this air conditioner.

1. **Press STOP/OPERATE (OFF/ON) button on the remote controller.**
   - If LCD display on the remote controller is visible:
     - Yes: Continue with the next step.
     - No: Replace the batteries. (Refer to 10-1.4.)
2. **Remove the batteries, then set them back and press RESET button. (Refer to 10-1.4.) Check if the unit operates with the remote controller.**
   - Yes: Continue with the next step.
   - No: Replace the remote controller.
3. **Assign a number of remote controller. (Refer to 8-2.) Check if the unit operates with the remote controller.**
   - Yes: Continue with the next step.
   - No: Replace the indoor electronic control P.C. board.
4. **Turn ON a radio to AM and press STOP/OPERATE (OFF/ON) button on the remote controller.**
   - **Is noise heard from radio?**
     - Yes: Replace the remote controller.
     - No: **Are there any fluorescent lights of inverter or rapid-start type within the range of 1 m?**
       - Yes: Reinstall the unit away from lights. Attach a filter on receiving part.
       - No: **Measure the voltage between display and receiver P.C. board connector CN301 No.1(-) and No.2(+):**
         - **Is the voltage approximately 4 V DC - 5 V DC?**
           - Yes: Replace the indoor electronic control P.C. board.
           - No: Replace the display and receiver P.C. board.

---

*1 Look at the image of the signal transmitting section of the remote controller through the monitor of a digital camera or a camera phone. It is normal if the LED of the signal transmitting section lights up when the STOP/OPERATE (OFF/ON) button on the remote controller is pressed. However, it may be difficult to see the illuminated LED of the signal transmitting section with a smartphone camera.

*2 If the inverter fluorescent light is turned on when the room is cool, the unit may have difficulty receiving the signal from the remote controller or may not be able to operate with it; if the inverter fluorescent light is turned on when the room is warm, the unit may be able to operate with the remote controller.
**Check of indoor P.C. board and indoor fan motor**

1. Turn OFF the power supply.
2. Remove indoor fan motor connector CN211 from indoor power P.C. board and vane motor connector CN151 from the indoor electronic control P.C. board and turn ON the power supply.
3. Does the unit operate with the remote controller? Does OPERATION INDICATOR lamp light up by pressing EMERGENCY OPERATION switch?
   - Yes
   - No

   3.1 Measure the resistance of indoor fan motor. Refer to 10-5.
   - Short circuit: Replace the indoor fan motor.

3.2 Measure the resistance of the vane motor coil. Refer to 10-5.
   - Short circuit: Replace the vane motor and the indoor electronic control P.C. board.

3.3 Measure the resistance of the i-see SENSOR MOTOR coil. Refer 10-5.
   - Short circuit: Replace the i-see SENSOR MOTOR and the indoor electronic P.C. board.

4. Replace the varistor (NR11) and fuse (F11). *3
   - Yes
   - No

   4.1 Are the varistor (NR11) burnt and the fuse (F11) blown?
   - Be sure to check both the fuse and the varistor in any case.
   - Is the fuse (F11) blown only?
     - Yes
     - No

   4.1.1 Measure the resistance between CN211 (+) and (-) of indoor fan motor connector. *1, *2
   - Short circuit: Replace the indoor fan motor.

   4.1.2 Replace the fuse (F11) and the indoor fan motor. *3

5. Turn OFF the power supply. Check both "parts side" and "pattern side" of the indoor power P.C. board visually.
6. Replace the varistor (NR11) and fuse (F11). *3
   - No

   6.1 Are the varistor (NR11) burnt and the fuse (F11) blown?
   - Be sure to check both the fuse and the varistor in any case.
   - Is the fuse (F11) blown only?
     - Yes
     - No

   6.1.1 Measure the resistance between CN211 (+) and (-) of indoor fan motor connector. *1, *2
   - Short circuit: Replace the indoor fan motor.

   6.1.2 Replace the fuse (F11) and the indoor fan motor. *3

7. Measure the resistance of the indoor power P.C. board.
   - Replace the indoor power P.C. board and the indoor fan motor.

8. Connect the connector or repair disconnection.

---

*1. The fan motor connector's lead wire is red, whereas is black.
2. Connect + of the tester to fan motor connector's lead wire, and - to lead wire, otherwise the resistance cannot be measured properly.
3. Please replace the fuse after removing the indoor power P.C. board from the electrical box.
D How to check miswiring and serial signal error

MUZ Type

Turn OFF the power supply.

Is there rated voltage in the power supply?  

Check for incorrect indoor-outdoor connecting wiring.

Was the indoor unit ever connected to the Multi (MXZ) series and operated (turned on)?

The connection information to the Multi series is stored in the indoor unit. Refer to “Deleting the memorized abnormal condition” described in 10-2.1 to clear the error history. When the error history is being cleared, the connection information also will be initialized. The indoor unit will be compatible with a low-standby-power model after initialization.

OK

B

Turn the power supply ON.

Is there rated voltage between outdoor terminal block S1 and S2?

Wait for 2 or more minutes after the power supply is turned on. Touch S2 and S3 with tester probes and start the emergency operation.

When the emergency operation starts, does the rated voltage occur for 2 seconds between indoor terminal block S2 and S3?

Does the indoor POWER lamp blink continuously 6 minutes after the emergency operation starts?

Yes

No

Does the outdoor LED light up?

Yes

No

Confirm that the thermostat is OFF and wiring is not loose.

Replace the outdoor inverter P.C. board.*1

Does DC (6 V or more) occur between indoor terminal block S2 and S3?

Yes

No

Replace the indoor electronic control P.C. board.

*1 Electric charge may remain immediately after the power supply is turned OFF. Perform the procedure after 3 minutes.

Replace the indoor power P.C. board.

Turn the power supply OFF.

Replace the indoor electronic control P.C. board.

Does the outdoor LED blink 6 times?

Yes

No

Replace the outdoor inverter P.C. board.*1

During the emergency operation, does DC (2 V or less) occur for 2 seconds between CN202 ③ and GND on the indoor electronic control P.C. board?

Yes

No

Replace the indoor power P.C. board.

Replace the indoor electronic control P.C. board.

Does the outdoor LED blink 6 times?

Yes

No

Repair completed.

Replace the outdoor inverter P.C. board.*1

Repair completed.

Is serial signal error indicated 6 minutes later?

Yes

No

*1 Electric charge may remain immediately after the power supply is turned OFF. Perform the procedure after 3 minutes.
MXZ Type

**A**
- Turn OFF inverter-controlled lighting equipment.
- Turn OFF the power supply and then turn ON again.
- Press EMERGENCY OPERATION switch.
- Is serial signal error indicated 6 minutes later?
  - Yes
  - Is serial signal error indicated 6 minutes later?
  - No

**B**
- Turn OFF the power supply.
  - Check once more if the indoor/outdoor connecting wire is not miswiring.
  - Remove the indoor/outdoor connecting wire from outdoor terminal block S3.
  - Short-circuit outdoor terminal block S2 and S3.*1

**C**
- (Refer to the next page.)

---

*1 Miswiring may damage indoor electronic control P.C. board during the operation. Be sure to confirm the wiring is correct before the operation starts.
LED indication for communication status

Communication status is indicated by the LED.

Unit status
Blinking: normal communication
Lit: abnormal communication or not connected

Pattern 1 and 2 is repeatedly displayed alternately. Each pattern is displayed for 10 seconds.

NOTE: “Lit” in the table below does not indicate abnormal communication.

Outdoor control P.C. board

<table>
<thead>
<tr>

Is the LED on the outdoor control P.C. board repeat "3.6-second-OFF and 0.8-second-ON quick blinking"?

Yes
Replace the outdoor control P.C. board.

No

Is there amplitude of 10 to 20 VDC between outdoor terminal block S2 and S3? <Confirmation of serial signal>

Yes

Is there rated voltage between indoor terminal block S1 and S2? <Confirmation of power voltage>

Yes

Replace the indoor/outdoor connecting wire.

No

Turn ON the power supply.

Is there any error of the indoor/outdoor connecting wire, such as the damage of the wire, intermediate connection, poor contact to the terminal block?

Yes

Replace the indoor/outdoor connecting wire.

No

Replace the indoor electronic control P.C. board.

Blinking: normal communication
Lit: abnormal communication or not connected

Do the LED indication for communication status

Communication status is indicated by the LED.

Unit status
Blinking: normal communication
Lit: abnormal communication or not connected

Pattern 1 and 2 is repeatedly displayed alternately. Each pattern is displayed for 10 seconds.

NOTE: “Lit” in the table below does not indicate abnormal communication.

</table>

Is there any error of the indoor/outdoor connecting wire, such as the damage of the wire, intermediate connection, poor contact to the terminal block?

Replace the indoor/outdoor connecting wire.

Be sure to release the failure-mode recall function after checking.

*2 Be careful of the residual voltage of smoothing capacitor.
After performing the check, make sure to release the failure mode recall function.

**High voltage (approximately 5.8kV) is generated during AIR PURIFYING power operation.**
Pay careful attention and never touch the air purifying device and the high-voltage lead part.

**1.** Regardless of normal or abnormal condition, a short beep is emitted once the signal is received.

**2.** Turn AIR PURIFYING power OFF and ON again.
(For turning OFF AIR PURIFYING power, refer to 10-2.3.)
(If it goes normal without turning OFF and ON, AIR PURIFYING lamp does not go OFF.)

**Abnormal discharge may occur due to much dirt on the air purifying device, clean it.**
After cleaning, make sure to attach the air purifying device since it is completely dry.
AIR PURIFYING lamp blinks continuously as well.

**Firmly fix the interlock switch (Air purifying device).**

---

### Check of AIR PURIFYING power

#### After performing the check, make sure to release the failure mode recall function.

<table>
<thead>
<tr>
<th>Turn ON the power supply.</th>
<th>Does AIR PURIFYING lamp flash 2-time with unit stopping?</th>

<td></td>
<td>No</td>
</tr>
</tbody>
</table>

Make sure that the front panel is firmly closed.

1. While pressing both OPERATION SELECT button and TEMP@button on the remote controller at the same time, press RESET button.
2. First, release RESET button.
   Hold down the other two buttons for another 3 seconds.
   Make sure that the indicators on the LCD screen shown in the right figure are all displayed. Then release the buttons.
3. Press STOP/OPERATE (OFF/ON) button.
   (the set temperature is displayed)
   And press PURIFIER button once with the remote controller headed towards the indoor unit.**1**
   AIR PURIFYING operation is selected.
   The AIR PURIFYING power operation check mode is set.
   (Refer to 10-2.5.)

---

**Replace the indoor electronic control P.C. board.**

---

Remove the air purifying device, firmly close the front panel, and then perform AIR PURIFYING power operation check (**2**). Does AIR PURIFYING lamp stay OFF, or continuously blink?

<table>
<thead>
<tr>
<th>Continuous blinking.</th>
<th>OFF</th>
</tr>
</thead>
</table>

Turn OFF the power supply, and check the interlock switch (Air purifying device). Is it firmly fixed?

<table>
<thead>
<tr>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
</table>

Work and Not-work the interlock switch (Air purifying device) using something like a screw driver, and measure the resistance between CN1R1(+) and 0(GND) on the indoor electronic control P.C. board. Does the interlock switch (Air purifying device) function?

<table>
<thead>
<tr>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
</table>

Keep the interlock switch (Air purifying device) Not-work (close) using something like a screw driver. Turn ON the power supply. Is the voltage between CN1T1(+) and 0(GND) on the electronic control P.C. board) 0V with the unit stopping?

<table>
<thead>
<tr>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
</table>

Set the AIR PURIFYING power failure mode recall function. (Refer to 10-2.2)

---

When AIR PURIFYING power turns ON by pressing PURIFIER button once, is there 12.5 V DC between CN1T1(+) and 0(GND)?

<table>
<thead>
<tr>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
</table>

Replace the interlock switch (Air purifying device).
Electromagnetic noise enters into TV sets or radios

Is the unit earthed?
- Yes
  - Earth the unit.
- No

Is the distance between the antennas and the indoor unit within 3 m, or is the distance between the antennas and the outdoor unit within 3 m?
- Yes
  - Extend the distance between the antennas and the indoor unit, and/or the antennas and the outdoor unit.
- No

Is the distance between the TV sets or radios and the indoor unit within 1 m, or is the distance between the TV sets or radios and the outdoor unit within 3 m?
- Yes
  - Extend the distance between the TV sets and/or radios and the indoor unit, or the TV sets or radios and the outdoor unit.
- No

Are the antennas damaged?
- Yes
  - Replace or repair the antenna.
- No

Is the coaxial cable damaged?
- Yes
  - Replace or repair the coaxial cable.
- No

Is there any poor contact in the antenna wiring?
- Yes
  - Replace or repair the antenna.
- No

Is the indoor/outdoor connecting wire of the air conditioner and the wiring of the antennas close?
- Yes
  - Extend the distance between the indoor/outdoor connecting wire of the air conditioner and the wiring of the antennas.
- No

Even if all of the above conditions are fulfilled, the electromagnetic noise may enter, depending on the electric field strength or the installation condition (combination of specific conditions such as antennas or wiring).

Check the following before asking for service.
1. Devices affected by the electromagnetic noise
   - TV sets, radios (FM/AM broadcast, shortwave)
2. Channel, frequency, broadcast station affected by the electromagnetic noise
3. Channel, frequency, broadcast station unaffected by the electromagnetic noise
4. Layout of:
   - indoor/outdoor unit of the air conditioner, indoor/outdoor wiring, earth wire, antennas, wiring from antennas, receiver
5. Electric field intensity of the broadcast station affected by the electromagnetic noise
6. Presence or absence of amplifier such as booster
7. Operation condition of air conditioner when the electromagnetic noise enters in
   1) Turn OFF the power supply once, and then turn ON the power supply. In this situation, check for the electromagnetic noise.
   2) Within 3 minutes after turning ON the power supply, press STOP/OPERATE (OFF/ON) button on the remote controller for power ON, and check for the electromagnetic noise.
   3) After a short time (3 minutes later after turning ON), the outdoor unit starts running. During operation, check for the electromagnetic noise.
   4) Press STOP/OPERATE (OFF/ON) button on the remote controller for power OFF, when the outdoor unit stops but the indoor/outdoor communication still runs on. In this situation, check for the electromagnetic noise.
10-7. TEST POINT DIAGRAM AND VOLTAGE

<"Terminal with locking mechanism" Detaching points>
The terminal which has the locking mechanism can be detached as shown below.
There are 2 types (Refer to (1) and (2)) of the terminal with locking mechanism.
The terminal without looking mechanism can be detached by pulling it out.
Check the shape of the terminal before detaching.

(1) Slide the sleeve and check if there is a locking lever or not.
(2) The terminal with this connector has the locking mechanism.

**OPERATING PROCEDURE**

1. Removing the front panel and the panels (U/R/L/F)
   Removing the front panel (Photos 1, 2)
   (1) Hold the front panel and open it.
   (2) Pry off the right and left arm holders by moving the screwdriver down and towards the back wall (Photo 2-1).
   (3) Remove the safety string from the center of the panel (F).

   **NOTE:** Hold the panel with your hand while detaching it to avoid injury. (Figure 1)

Photo 2-2

Figure 1

**NOTE:** Turn OFF the power supply before disassembly.
OPERATING PROCEDURE

How to install the front panel (Photos 1, 2, 3)
(1) Attach the right and left arm holders (Photo 2).
(2) Install the front panel to the indoor unit.
(3) Attach the safety string to the center of the panel (F).
(4) Push the locations indicated by the arrows firmly to close the front panel (Figure 2).

Removing the panel (U) (Photo 1)
(1) Remove the front panel.
(2) Insert a flat tool such as a ruler into the groove of the stopper of outer vane (R) (horizontal). Slide the tool and remove the outer vanes (R) (horizontal). Remove the outer vane (L) (horizontal) in the same manner.
(3) Remove the 2 screw caps on the right and left sides of the panel (U), and remove the 2 screws.
(4) Disengage the catch on the center of the panel (U), and pull it toward you to remove.

How to install the panel (U) (Photo 1)
(1) Press the center of the panel (U) from the front to snap into place.
(2) Install the 2 screws in the right and left sides of the panel (U), and cover them with 2 screw caps.

Removing the panel (R) (Photos 1, 2, 3)
(1) Remove the front panel and the outer vanes (R) (L) (horizontal).
(2) Remove the panel (U).
(3) Remove the 2 screws of the panel (R), and pull the top of the panel (R) toward you to remove.

How to install the panel (R) (Photos 1, 2, 3)
(1) Install the panel (R) from the bottom to the top.
(2) Install the 2 screws in the panel (R).

Removing the panel (L) (Photos 1, 2, 3)
(1) Remove the front panel and the outer vanes (R) (L) (horizontal).
(2) Remove the panel (U).
(3) Remove the screw of the panel (L), and pull the top of the panel (L) toward you to remove.

How to install the panel (L) (Photos 1, 2, 3)
(1) Install the panel (L) from the bottom to the top.
(2) Install the screw in the panel (L).

Removing the panel (F) (Photo 3)
(1) Remove the front panel and the outer vanes (R) (L) (horizontal).
(2) Remove the panels (U) (R) (L).
(3) Remove the Wi-Fi interface on the right side of the panel (F). Pull out its cable, and remove the cable tie (refer to 2).
(4) Remove the panel (F) from the bottom to the top.

How to install the panel (F)
(1) Install the panel (F) from the top to the bottom.
(2) Install the Wi-Fi interface.
(3) Install the panels (U) (R) (L).
(4) Install the outer vanes (R) (L) (horizontal) and the front panel.

PHOTOS/FIGURES

Figure 2

Photo 3

Panel (F)

Panel (R)

Panel (L)
2. Removing the Wi-Fi interface (Photos 4, 8)
   (1) Remove the front panel and the panels (U) (R) (L).
   (2) Remove the Wi-Fi interface on the right side of the panel (F). Pull out its cable, and remove the cable tie, then remove the panel (F).
   (3) Remove the screw of the V.A. clamp and remove the V.A. clamp.
   (4) Remove the screw of the electrical cover, and remove the electrical cover.
   (5) Disconnect the following connector (Photo 8):
       <Indoor electronic control P.C. board>
       CN110 (Wi-Fi interface)
   (6) Remove the cable of Wi-Fi interface from the water cover.

   How to install the Wi-Fi interface (Photo 4)
   Note: Install the Wi-Fi interface before installing the panel (R).
   (1) Install the panel (F).
   (2) Fasten the cable of Wi-Fi interface to the part $\Box$ of the panel (F) with a cable tie.
   (3) Stow the cable of Wi-Fi interface in the area $\circ$.
   (4) Attach the Wi-Fi interface so its cable side faces away from you.
   (5) Fasten the cable of Wi-Fi interface to the water cover.
   (6) Connect the connector of Wi-Fi interface (CN110) to the indoor electronic control P.C. board.
   (7) Install the electrical cover, and install the screw in the electrical cover.
   (8) Install the V.A. clamp, and install the screw in the V.A. clamp.
   (9) Install the panel (R).
   (10) Install the panels (L) (U).
### OPERATING PROCEDURE

**3. Removing the indoor electrical box (Photos 4, 5, 6, 7, 8)**

1. Remove the front panel, the outer vanes (R) (L) (horizontal), and the panels (U) (R) (L) (F) (refer to 1).
2. Remove the lead wires of indoor coil thermistor, lead wires of air purifying device, and cable of Wi-Fi interface from the water cover (Photo 4).
3. Remove the 2 screws of the CLR earth plate.
4. Disengage the catches of the water cover, and remove the water cover.
5. Remove the corner box (R) (Photo 5).
6. Remove the screw of the V.A. clamp, and remove the V.A. clamp (Photo 4).
7. Remove the screw of the electrical cover, and remove the electrical cover (Photo 6).
8. Disconnect the following connectors (Photo 8):
   - Indoor electronic control P.C. board
     - CN1J1 (DISPLAY AND i-see SENSOR ASSEMBLY)
     - CN2T1 (Limit switch)
9. Remove the DISPLAY AND i-see SENSOR ASSEMBLY (Photo 7).
10. Disconnect the following connector (Photo 8):
    - Indoor electronic control P.C. board
      - CN110 (Wi-Fi interface)
11. Remove the Wi-Fi interface (refer to 2).
12. Remove the screw of the electrical box (Photo 7).
13. Disconnect the following connectors (Photo 8):
    - Indoor power P.C. board
    - CN211 (Indoor fan motor)
    - Indoor electronic control P.C. board
    - CN151 (Vane motors)
    - CN112 (Indoor coil thermistor)
    - CN1T1 (Air purifying device)
14. Remove the electrical box.

- DISPLAY AND i-see SENSOR ASSEMBLY
- Screw of the electrical box

Remove the DISPLAY AND i-see Sensor ASSEMBLY to the direction of .
### OPERATING PROCEDURE

4. Removing the indoor electronic control P.C. board, the indoor power P.C. board, the indoor terminal block, and the room temperature thermistor

1. Remove the electrical box (refer to 3).

   **Removing the indoor terminal block (Photos 6, 8)**

2. Remove the screw of the terminal block. (Photo 6)
3. Disconnect the following connector:
   - CN202 (To the indoor electronic control P.C. board)
4. Remove the heat sink cover.
5. Disconnect the connectors of the indoor terminal block (TAB3 and CN201).
6. Disconnect the earth wire (LD104) from the earth plate.

   **Removing the indoor electronic control P.C. board and the indoor power P.C. board (Photo 8)**

2. Disconnect all the connectors on the indoor electronic control P.C. board and the indoor power P.C. board.
3. Remove the indoor electronic control P.C. board and the indoor power P.C. board.

   **Removing the room temperature thermistor (Photo 8)**

2. Disconnect the following connector:
   - CN111 (Room temperature thermistor)
3. Remove the room temperature thermistor.

---

## OPERATING PROCEDURE

### 5. Removing the DISPLAY AND i-see SENSOR ASSEMBLY, the switch buzzer P.C. board, the display and receiver P.C. board, and the interlock switch (Photo 9)

1. Disengage the 4 catches of the display cover, and remove the display cover (Photo 9-1).
2. Remove the lead wires of the DISPLAY AND i-see SENSOR ASSEMBLY from the hooks (Photo 9-2).
3. Disengage the 4 catches of the switch holder, and remove the switch holder (Photo 9-3).
4. Turn over the switch holder. Remove the lead wires of the switch buzzer P.C. board, the display and receiver P.C. board, and the interlock switch from the hook. Remove the switch buzzer P.C. board, the display and receiver P.C. board, and the interlock switch (Photo 9-4).

---

**Top view of DISPLAY AND i-see SENSOR ASSEMBLY**

**Front view of DISPLAY AND i-see SENSOR ASSEMBLY**

**Right side view of DISPLAY AND i-see SENSOR ASSEMBLY**
6. Removing the outer vane motors (horizontal) (Photos 8, 10, 11, 12, 13)

(1) Remove the front panel, the outer vanes (R) (L) (horizontal), the panels (U) (R) (L) (F), the corner boxes (R) (L), Wi-Fi interface, DISPLAY and i-see SENSOR ASSEMBLY, V.A. clamp, and the electrical cover.

(2) Remove the following connector (Photo 8):
   - Indoor electronic control P.C. board
   - CN151 (Vane motors)

(3) Pull out the drain hose from the nozzle assembly.

(4) Pull and remove the nozzle assembly (catches on left, right, and center) (Photo 10).

(5) Cut off the cable tie to secure the lead wires on the right side of the nozzle assembly (Photo 12).

(6) Remove the tape to secure the lead wires and the aluminum tape on the front of the nozzle assembly (Photo 11).

Removing outer vane motor (R) (horizontal) (Photo 12)

(7) Loosen the lead wires, and disconnect the connector of the outer vane motor (R) (horizontal).

(8) Remove the 2 screws of the outer vane motor (R) (horizontal).

(9) Remove the outer vane motor (R) (horizontal).

Removing outer vane motor (L) (horizontal) (Photo 13)

(10) Loosen the lead wires, and disconnect the connector of the outer vane motor (L) (horizontal).

(11) Remove the 2 screws of the outer vane motor (L) (horizontal).

(12) Remove the outer vane motor (L) (horizontal).
7. Removing the vane motor units (L) (R) (vertical) and the vane motors (horizontal)

(1) Remove the front panel, the outer vanes (R) (L) (horizontal), the inner vanes (R) (L), the vane slide assembly, the panels (U) (R) (L) (F), the corner boxes (R) (L), Wi-Fi interface, DISPLAY and i-see SENSOR ASSEMBLY, V.A. clamp, and the electrical cover.

(2) Remove the panel (F) (Photo 3).

(3) Remove the following connector (Photo 8):<br>&lt;Indoor electronic control P.C. board&gt;<br>CN151 (Vane motors)

(4) Pull out the drain hose from the nozzle assembly. Pull and remove the nozzle assembly (catches on left, right, and center) (Photo 10).

(5) Cut off the cable tie to secure the lead wires on the right side of the nozzle assembly (Photo 12).

(6) Remove the tape to secure the lead wires and the aluminum tape on the front of the nozzle assembly. (Photo 11)

Removing the vane motor (R) (horizontal) and the vane motor (horizontal) (Photo 14, 15)

(7) Remove the 3 screws of the vane motor unit (R) (horizontal) and remove the lead wires of the vane motor (R) (vertical), the vane motor (R) (horizontal) and the vane motor (horizontal).

(8) Remove the 2 screws of the vane motor (R) (horizontal) from the backside of the vane motor unit (R) (horizontal), and remove the vane motor (R) (horizontal).

(9) Remove the 2 screws of the vane motor (horizontal) from the backside of the vane motor unit (R) (horizontal), and remove the vane motor (horizontal).

Removing the vane motor unit (R) (vertical) (Photo 15)

(10) Disengage the link of the vane motor unit (R) (vertical).

(11) Remove the screw indicated in , and remove the vane motor unit (R) (vertical).

Removing the vane motor (L) (horizontal) (Photo 16)

(12) Disengage the link of the vane motor unit (L) (vertical).

(13) Remove the 3 screws indicated in (Photo 16).

(14) Remove the 2 screws of the vane motor (L) (horizontal) from the backside of the vane motor unit (L) (horizontal), and remove the vane motor (horizontal).

Removing the vane motor unit (L) (vertical) (Photo 17)

(15) Disengage the catch of the vane motor unit (L) (vertical), and remove the vane motor unit (L) (vertical).
8. Removing the air purifying device (Photo 8, 18)
   (1) Remove the front panel, the outer vanes (R) (L) (horizontal), the panels (U) (R) (L) (F), the corner box (R), V.A. clamp and the electrical cover.
   (2) Remove the lead wires from the water cover.
   (3) Disconnect the following connector (Photo 8):
       <Indoor electronic control P.C. board>
       CN1T1 (Air purifying device)
   (4) Remove the screw of the air purifying device support.
   (5) Remove the air purifying device support.

9. Removing the line flow fan, the indoor fan motor assembly, the indoor coil thermistor, and the heat exchanger (Photo 4, 18, 19, 20, 21, 22)
   (1) Remove the front panel, the outer vanes (R) (L) (horizontal), the panels (U) (R) (L) (F), and the corner boxes (R) (L), Wi-Fi interface, DISPLAY and i-see SENSOR ASSEMBLY, the electrical box, the nozzle assembly and the air purifying device.
   (2) Loosen the screw inside the right side of the line flow fan (Photo 19).
   (3) Remove the 3 screws of the fan motor assembly.
       Pull the fan motor assembly slightly toward you, and remove it by pulling to the right (Photo 20).
   (4) Remove the indoor coil thermistor from the heat exchanger.
   (5) Remove the 2 screws of the hairpin holder on the left side of the heat exchanger. Raise the left side of the heat exchanger, and pull the line flow fan to the lower left to remove (Photo 21).
   (6) Disengage the 2 catches on the right side of the heat exchanger, and remove the heat exchanger (Photo 22).
   *1 When attaching the line flow fan, screw the line flow fan so 4 mm gap is provided between the right end of the line flow fan and the right wall of the air passage of the box (Figure 1).
Fixing the indoor coil thermistor

There are 2 forms of parts for fixing the indoor coil thermistor.

- **Clip shape**
- **Holder shape**

**NOTE:**
- Take care to avoid loss and accidental falling of the clip-shape part inside the unit.
- Mount the clip-shape part on the marked position.
- Do not pull the lead wire when removing the indoor coil thermistor.

Position and procedure for mounting the clip-shape part

1. Set the indoor coil thermistor in the center of the clip-shape part.
2. Check the (marked) mounting position.
3. Mount the clip-shape part.

When fixing the indoor coil thermistor to the clip-shape/holder-shape part, the lead wire should point down.

About the same length
